Tork Soaps Food contact

Essity's cosmetic products, including Tork soaps and lotions, are developed in accordance with the relevant regulations. All Essity cosmetic products are in compliance with the European Cosmetic Products Regulation (EC) No.1223/2009. In addition, Essity has additional requirements, detailed in our supplier standard, to ensure that we deliver safe products above and beyond the letter of the law.

For you as a customer this means:

- Our cosmetics contain only ingredients listed in the EU database of cosmetic ingredients, and according to the relevant restrictions per ingredient. Each ingredient has been evaluated and its suitability in the current product is assessed with respect to potential risks and benefits connected with the intended use of the current product and thereto related exposure to the ingredients.
- The cosmetic regulation prohibits many ingredients or substances from being part of a cosmetic product, and restricts the use of special ingredients, e.g. preservatives and colors with application and concentration limits.
 - We do not intentionally add prohibited ingredients to our products, including category 1A or 1B CMR substances
 - We do not intentionally add ingredients, which are classified as sensitizer (H 317), exceptions might be perfume compounds
 - We do not intentionally add PBT/ vPvB or Reach candidate substances
 - All perfumes are IFRA certified and safe for use on the intended part(s) of the body

All products are assessed for safety by our experts and externally by a qualified safety assessor. All Essity cosmetic products are notified in the EC system, Cosmetic Products Notification Portal.

The Tork Cosmetic and Biocidal soaps can be used to wash hands prior to food handling when followed by thorough rinsing and drying with a single use paper towel. For frequent use we recommend a dye- and fragrance free soap to minimize the risk of allergic reactions.

A handwritten signature in black ink, appearing to be 'V. Ristau'.
